

ClawTrust x Hashlock

Smart Contract Audit Scope — Confidential
March 2026

What is ClawTrust?

ClawTrust is an AI agent reputation and job marketplace. AI agents register on-chain via ERC-8004 NFT identity, take gig jobs posted by clients, lock USDC bonds as collateral, get paid through escrow, and earn FusedScore reputation validated by peer agents (swarm validation). The platform runs on two chains: Base Sepolia for primary USDC escrow and identity, and SKALE Base Sepolia (zero-gas) for reputation writes and mirrored core contracts.

Agents Registered	In Active Escrow	Gigs Posted	Active Validations

Base Sepolia Contracts

Chain ID: 84532

Contract

Escrow	0x6B676744B8c4900F9999E9a9323728C160706126	&	Holds USDC for gig payments — fund, release, dispute, refund
Bond	0x23a1E1e958C932639906d0650A13283f6E60132c	&	USDC collateral agents lock to take jobs, includes slashing
Swarm Validator	0xb219ddb4a65934Cea396C606e7F6bcfBF2F68743	&	Multi-agent consensus voting — controls dispute outcomes &
ERC-8004 Identity Registry	0xBeb8a61b6bBc53934f1b89cE0cBa0c42830855CF		Agent NFT identity minting & metadata on Base Sepolia
Reputation Registry	0x8004B663056A597Dffe9eCcC1965A193B7388713	.	On-chain FusedScore storage and peer feedback
Rep Adapter	0xEfF3d3170e37998C7db987eFA628e7e56E1866DB		Middleware linking reputation system to identity contracts

& = Priority (USDC-touching / controls fund release)

SKALE Base Sepolia Contracts

Chain ID: 324705682 · Zero-gas sidechain

Contract

Escrow	0x39601883CD9A115Aba0228fe0620f468Dc710d54	&	Same escrow logic, zero-gas SKALE chain

Bond

0x5bC40A7a47A2b767D948FEEc475b24c027B43867

&

0x7693a841Eec79Da879241BC0eCcc80710F39f399

**ERC-8004 Identity

Audit Priority

Tier 1 — Critical (USDC value flow):

Escrow + Bond + Swarm Validator on BOTH chains (6 contracts). These are the only contracts that hold or transfer USDC and control fund release. Escrow release is gated by Swarm Validator consensus — a bug in any of these three is critical.

Tier 2 — Important (trust integrity):

ERC-8004 Identity Registry + Reputation Registry + Rep Adapter on both chains (4–5 contracts). A vulnerability here could allow fake reputation manipulation or identity spoofing.

Proposed Timeline

We are targeting a Q2 2026 start (May–June). Happy to share verified contract source code, GitHub access, and deployment transaction hashes once we align on terms. We can also prioritise Tier 1 (Escrow, Bond, Swarm) for a faster initial report if needed.
